## SEMI-DOWNDRAFT MODELS UE2489SDP 1004P

This UniCure Semi-downdraft Prep Station comes in two models. The UE2489SDP features a pressurized upper plenum that forces air through the prep area. The UNI1004P is also pressurized and comes with a heated air make-up system to add even more functionality. Both systems have a crossover exhaust plenum that can be combined with a curtain wall to create a drive through option. The ceiling section and upper plenum can be suspended or floor support structures are available. The semi-downdraft design does not require the installation of a pit. Whether you are preparing the vehicle to go into the paint booth, painting a small job, or simply painting parts off the vehicle, this system will add flexibility to your operation.
